**WATER QUALITY REPORT**  
**PWS I.D. NO. 1150197**

*Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.* (This report contains very important information about your drinking water. Translate it, or speak with someone who understands it).

Valley Crossings is pleased to provide you with this 2008 Annual Water Quality report, also known as a Consumer Confidence Report (CCR). This report will inform you about the quality of drinking water Valley Crossings has delivered to you during 2008. If you have any questions about this report, or concerning water quality, please contact Ms. Janice Duca of Valley Township, 890 W. Lincoln Highway, Coatesville, PA 19320, (610)384-5751.

We want you to be informed about your water supply. If you want to learn more, please attend any of our regularly scheduled meetings held in the township Building at 7:30 p.m. on the 1<sup>st</sup> and 3<sup>rd</sup> Tuesday of each month.

We routinely monitor for contaminants in your drinking water according to federal and state laws. The following tables show the results of our monitoring for the period of January 1 to December 31, 2008. The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data is from prior years in accordance with the Safe Drinking Water Act. The sample year has been noted in the sampling results table next to the name of the contaminant.

The water for Valley Crossings is provided through an inter-connection with the Pennsylvania (PA) American Water Company – Coatesville system. PA American's source of water is the Rock Run Reservoir and this water is treated at the Rock Run water treatment plant prior to delivery to consumers. During drought conditions, water may be released from Chambers Lake and from the West Branch of Brandywine Creek to the Rock Run Reservoir to replenish supplies.

A Source Water Assessment for the *Rock Run* treatment plant was completed in 2003 by the PA Department of Environmental Protection (PADEP). The Assessment has found that this source is potentially most susceptible to stormwater, agricultural and construction runoff, discharges from the septic systems, sewerage systems, wastewater treatment plants and above ground and underground chemical storage tanks. Overall, this source has a moderate risk of significant contamination.

Summary reports of the Assessment are available by writing to Valley Township, 890 West Lincoln Highway, P.O. Box 467, Coatesville, PA 19320 and will be available on the PADEP website at [www.dep.state.pa.us](http://www.dep.state.pa.us) Keyword: "DEP Source Water"). Complete reports were distributed to municipalities, water supplier, local planning agencies and PADEP offices. Copies of the complete report are available for review at the PADEP Southeast Region, Records Management Unit at 484-250-5900.

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land, or through the ground, it dissolves naturally occurring minerals, and in some cases radioactive material, and can pick up substances resulting from the presence of animals or human activity. Contaminants that may be present in some water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic contaminants, such as salt and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and also come from gas stations, urban stormwater runoff and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

*Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA and Centers for Disease Control guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).*

2008 WATER QUALITY REPORT  
VALLEY CROSSINGS

VALLEY CROSSINGS - PWS I.D. NO. 1150197

DISINFECTION BYPRODUCTS (DBP'S) AND DISINFECTANT RESIDUALS							
Contaminant	MCL in CCR Units	MCLG	Highest Level Detected	Range of Detection	Units of Measurement	Violation yes/no	Sources of Contamination
TTHM (2008)	80	n/a	8.20	0.7 - 8.2	ppb	NO	Byproduct of drinking water chlorination.
HAA5 (2008)	60	n/a	3	0 - 3	ppb	NO	Byproduct of drinking water chlorination.
Chlorine (2008)	4 (MRDL)	4 (MRDLG)	1.29	0.1 - 1.29	ppm	NO	Water additive used to control microbes.
LEAD AND COPPER							
Contaminant	Action Level (AL)	MCLG	90th Percentile Value	Units	# of Sites Above AL	Violation of T1 Y/N	Sources of Contamination
Lead (2007)	15	15	2.00	ppb	0	NO	Corrosion of household plumbing systems; erosion of natural deposits.
Copper (2007)	1.3	1.3	0.0802	ppm	0	NO	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

PENNSYLVANIA AMERICAN - COATESVILLE PWS I.D. NO. 1150106

INORGANIC CONTAMINANTS							
Contaminant	MCL in CCR Units	MCLG	Highest Level Detected	Range of Detections	Units of Measurement	Violation yes/no	Sources of Contamination
Nitrate (2008)	10	10	2.7	1 Sample	ppm	NO	Runoff from fertilizer; leaching from septic tanks; sewage; erosion of natural deposits.
Fluoride (2008)	2	2	1.3	0.70 to 1.30	ppm	NO	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories.
Barium (2006)	2	2	0.058	0.055 - 0.058	ppm	NO	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits.
Nickel (2006)	100	100	1.8	1.6 - 1.8	ppb	NO	Erosion of natural deposits.
SYNTHETIC ORGANIC CONTAMINANTS INCLUDING PESTICIDES AND HERBICIDES							
2,4 - D (2006)	70	70	0.2	nd - 0.2	ppb	NO	Runoff from herbicide used on row crops.
MICROBIOLOGICAL							
Disinfectant	MCL IN CCR UNITS	MCLG	Positive Samples Present or Absent		Violation yes/no	Sources of Contamination	
Total Coliform Bacteria (2008)	Present	n/a	Present		NO	Naturally present in the environment.	
DISINFECTION BYPRODUCTS, BYPRODUCT PRECURSORS AND DISINFECTANT RESIDUALS							
Contaminant (2008)	MCL	MCLG	Level Detected	Range of Detections	Units of Measurement	Violation yes/no	Sources of Contamination
TTHM	80	n/a	48	26 - 100	ppb	NO	Byproduct of drinking water chlorination.
HAA5	60	n/a	37	ND - 80	ppb	NO	By-product of drinking water disinfection.
Chlorine	4 (MRDL)	4 (MRDLG)	1.35	1.24 - 1.64	ppm	NO	Water additive used to control microbes.

**TOTAL ORGANIC CARBON REMOVAL**

Contaminant	TT Requirement	Range of % Removal Required	Range of % Removal Achieved	Units of Measurement	Violation yes/no	Source Contamination
TOC (2008) (% removal)	Meet EPA Removal Requirement	2.53	1.47 - 2.92	ppm	NO	Naturally decaying vegetation

Adequate removal of TOC may be necessary to control the unwanted formation of chlorinated by-products. Naturally occurring organic matter present in the source water can react with the disinfectant used at the treatment facility to form these by-products. Coatesville system met the required treatment technique for TOC reduction in 2008.

**LEAD AND COPPER**

Contaminant	Action Level (AL)	MCLG	90th Percentile Value	Units	# of Sites Above AL	Violation of TT yes/no	Sources of Contamination
Copper (2007)	1.3	1.3	0.144	ppm	0	NO	Corrosion of household plumbing systems; erosion of natural deposits.
Lead (2007)	15	0	2.0	ppb	2	NO	Corrosion of household plumbing systems; erosion of natural deposits.

**DEFINITIONS AND ABBREVIATIONS:**

<b>Action Level (AL)</b>	The concentration of a contaminant which, if exceeded, triggers treatment or other requirements
<b>Max. Contaminant Level (MCL)</b>	The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
<b>Max. Contaminant Level Goal (MCLG)</b>	The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
<b>Max. Residual Disinfectant Level (MRDL)</b>	The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
<b>Max. Residual Disinfectant Level Goal (MRDLG)</b>	The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
<b>Treatment Technique (TT)</b>	A required process intended to reduce the level of a contaminant in drinking water.
<b>ND = non detect</b>	<b>ppm</b> = parts per million, or milligrams per liter (mg/L)
<b>pCi/L = picocuries per liter (a measure of radioactivity)</b>	<b>n/a</b> = not applicable
<b>ppb = parts per billion, or micrograms per liter (µg/L)</b>	<b>TOC</b> = Total Organic Carbon

Valley Crossings routinely monitors for constituents in your drinking water according to Federal and State Laws. This table shows the result of our monitoring for the period January 1, 2008 through December 31, 2008. Drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. The presence of these contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling: **Environmental Protection Agency's Safe Drinking Water Hotline 1-800-426-4791.**
