VALLEY SPRINGS WATER COMPANY
2008
WATER QUALITY REPORT
PWS I.D. No. 1150185

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien. (This report contains very important information about your drinking water. Translate it, or speak with someone who understands it).

Valley Springs is pleased to provide you with this 2008 Annual Water Quality report, also known as a Consumer Confidence Report (CCR). This report will inform you about the quality of drinking water Valley Springs has delivered to you during 2008. If you have any questions about this report, or concerning water quality, please contact Ms. Janice Duca of Valley Township, 890 W. Lincoln Highway, Coatesville, PA 19320, (610)384-5751.

We want you to be informed about your water supply. Regularly scheduled Board Meetings are held at 7:30 p.m. on the 1st and 3rd Tuesday of each month in the Township Building.

We routinely monitor for contaminants in your drinking water according to federal and state laws. The following tables show the results of our monitoring for the period of January 1 to December 31, 2008. The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data is from prior years in accordance with the Safe Drinking Water Act. The sample year has been noted in the sampling results table next to the name of the contaminant.

The water for Valley Springs is provided through an inter-connection with the Pennsylvania (PA) American Water Company – Coatesville system and the Valley Springs Water Company; in other words, the PA American Water Company and Valley Springs Water Company provide water to the Valley Springs. PA American's source of water is the Rock Run Reservoir and this water is treated at the Rock Run water treatment plant prior to delivery to consumers. During drought conditions, water may be released from Chambers Lake and from the West Branch of Brandywine Creek to the Rock Run Reservoir to replenish supplies.

A Source Water Assessment of the three (3) ground water wells, which supply water to the Valley Springs Water Company, was completed in May 2005 by the Pennsylvania Department of Environmental Protection (PADEP). The assessment found that the three (3) wells are potentially most susceptible to agricultural practices. Overall the wells have medium-high risk of significant

contamination. Summary reports are available by writing to Janice Duca at 890 West Lincoln Highway, P.O. Box 467, Coatesville, PA 19320 and will be available on the PADEP Website at www.dep.state.pa.us (Keyword: DEP Source Water). Complete reports were distributed to municipalities, water suppliers, local planning agencies and PADEP offices. Copies of complete reports are available for review at the PADEP Southeast Regional Office, Records Management Unit at 484-250-5900.

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land, or through the ground, it dissolves naturally occurring minerals, and in some cases radioactive material, and can pick up substances resulting from the presence of animals or human activity. Contaminants that may be present in some water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic contaminants, such as salt and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and also come from gas stations, urban stormwater runoff and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA and Centers for Disease Control guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

2008 WATER QUALITY REPORT
VALLEY SPRINGS

VALLEY SPRINGS - PWS I.D. # 1150183

INORGANIC CONTAMINANTS							
Contaminant	MCL in CCR Units	MCLG	Highest Level Detected	Range of Detections	Units of Measurement	Violation yes/no	Sources of Contamination
Nitrate (2008)	10	10	3.460	1.1 - 3.46	ppm	NO	Runoff from fertilizer and leaching from septic tanks; erosion of natural deposits.
Disinfectant/DBP TTHM (Trihalomethanes) (2005)	80	n/a	3.1	1 Sample	ppb	NO	Byproduct of drinking water chlorination.
Haloacetic Acids [HAA5] (2005)	60	n/a	1.3	1 Sample	ppb	NO	By-product of drinking water disinfection.
Chlorine (2008)	4 (MRDL)	(MRDLG) 4	1.46	0.31 - 1.46	ppm	NO	Water additive used to control microbes.
LEAD AND COPPER							
Contaminant	Action Level (AL)	MCLG	90th Percentile Value	Units of Measurement	Number of Sites Above AL of Seven Sites	Violation of TT Y/N	Sources of Contamination
Copper (2007)	1.3	1.3	0.0957	ppm	0	NO	Corrosion of household plumbing systems; erosion of natural deposits.
Lead (2007)	15	0	2	ppb	0	NO	Corrosion of household plumbing systems; erosion of natural deposits.

PENNSYLVANIA AMERICAN - COATESVILLE PWS I.D. NO. 1150106

INORGANIC CONTAMINANTS							
Contaminant	MCL in CCR Units	MCLG	Highest Level Detected	Range of Detections	Units of Measurement	Violation yes/no	Sources of Contamination
Nitrate (2008)	10	10	2.7	1 Sample	ppm	NO	Runoff from fertilizer; leaching from septic tanks; sewage; erosion of natural deposits.
Fluoride (2008)	2	2	1.3	0.70 to 1.30	ppm	NO	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories.
Barium (2006)	2	2	0.058	0.055 - 0.058	ppm	NO	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits.
Nickel (2006)	100	100	1.8	1.6 - 1.8	ppb	NO	Erosion of natural deposits.
SYNTHETIC ORGANIC CONTAMINANTS INCLUDING PESTICIDES AND HERBICIDES							
2,4 - D (2006)	70	70	0.2	nd - 0.2	ppb	NO	Runoff from herbicide used on row crops.
MICROBIOLOGICAL							
Disinfectant Total Coliform Bacteria (2008)	MCL IN CCR UNITS	MCLG	Positive Samples Present or Absent	Violation yes/no	Sources of Contamination		
Present	n/a	n/a	Present	NO	Naturally present in the environment.		

DISINFECTION BYPRODUCTS, BYPRODUCT PRECURSORS AND DISINFECTANT RESIDUALS

Contaminant (2008)	MCL	MCLG	Level Detected	Range of Detections	Units of Measurement	Violation yes/no	Sources of Contamination
TTHM	80	n/a	48	26 - 100	ppb	NO	Byproduct of drinking water chlorination.
HAA5	60	n/a	37	ND - 80	ppb	NO	By-product of drinking water disinfection.
Chlorine	4 (MRDL)	4 (MRDLG)	1.35	1.24 - 1.64	ppm	NO	Water additive used to control microbes.

TOTAL ORGANIC CARBON REMOVAL

Contaminant	TT	Removal Required	Removal Achieved	Units of Measurement	Violation yes/no	Source Contamination
TOC (2008) (% removal)	Meet EPA Removal Requirement	2.53	1.47 - 2.92	ppm	NO	Naturally decaying vegetation

Adequate removal of TOC may be necessary to control the unwanted formation of chlorinated by-products. Naturally occurring organic matter present in the source water can react with the disinfectants used at the treatment facility to form these by-products. Coatesville system met the required treatment technique for TOC reduction in 2008.

LEAD AND COPPER

Contaminant	Action Level (AL)	MCLG	90th Percentile Value	Units	# of Sites Above AL	Violation of TT yes/no	Sources of Contamination
Copper (2007)	1.3	1.3	0.144	ppm	0	NO	Corrosion of household plumbing systems; erosion of natural deposits.
Lead (2007)	15	0	2.0	ppb	2	NO	Corrosion of household plumbing systems; erosion of natural deposits.

DEFINITIONS AND ABBREVIATIONS

pCi/L - picocuries per liter (a measure of radioactivity)
n/a - not applicable
Parts per million (ppm) - or milligrams per liter (mg/L)
Parts per billion (ppb) - or micrograms per liter (µg/L)
Action Level (AL) - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
IF YOU HAVE ANY QUESTIONS REGARDING THIS REPORT OR CONCERNING YOUR UTILITY, PLEASE CONTACT MS. JANICE DUCA.
VALLEY SPRINGS WATER COMPANY WANTS THEIR VALUED CUSTOMERS TO BE INFORMED ABOUT THEIR WATER QUALITY.
VALLEY SPRINGS WATER COMPANY

Valley Springs routinely monitors for constituents in your drinking water according to Federal and State Laws. This table shows the result of our monitoring for the period January 1, 2008 through December 31, 2008. Drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. The presence of these contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling:

ENVIRONMENTAL PROTECTION AGENCY'S Safe Drinking Water Hotline 1-800-426-4791
